

SALESGENIE AI

Lead Scoring Engine

Module 4 — Lead Scoring & Recommendation Engine

Kirti Chandra Nayak

Backend Developer · Team C

Team Task Chart · Day 17

Virtual Class Session

AGENDA

What I'll walk through today

01

Project Recap

Where Lead Scoring fits inside SalesGenie AI

02

My Role & Scope

Backend boundary vs. the AI/ML engineer's work

03

Today's Key Task

Lead scoring & conversion probability model

04

Backend Architecture

How rules + ML features flow through the system

05

Tech Stack

VS Code · Python · Streamlit

06

Deliverable & Next Steps

The Lead Scoring Engine and what follows

Where this task sits in SalesGenie AI

3

AI Outreach Generation

- Personalized cold emails & sales messages
- Outreach content generated from prospect profiles
- Communication strategy customized per industry

4

Lead Scoring & Recommendation Engine

- Predict conversion likelihood using AI models
- Assign lead scores from engagement & company data
- Generate next-best-action recommendations

↳ Today's focus

Backend Developer

BACKEND DEVELOPER

Build, store, serve the score

- Design the lead scoring data model & DB schema
- Implement the rules-based scoring logic
- Build the API layer that computes & serves scores
- Integrate the ML model's output into the scoring pipeline
- Connect the scoring engine to the Streamlit app

Implement Lead Scoring & Conversion Probability Model

Backend implementation

1

Rules Engine

Encode measurable signals — company size, industry fit, engagement events — into a weighted scoring function.

2

Score Storage

Design the schema and store computed lead scores per lead in the database.

3

Scoring API

Expose a backend endpoint / function that computes and returns a lead's final score.

How a lead score gets built and served

Tools I'm building this with

VS Code

Development environment for writing and organizing the backend codebase.

Python

Core language for the rules engine, scoring logic, and API layer.

Streamlit

Front-end surface that consumes the scoring API and displays results.

DELIVERABLE

Lead Scoring Engine

What the backend delivers as part of Module 4

- **Data model** Schema to store lead attributes, rule scores, ML probability, and final score
- **Rules engine** Configurable scoring logic based on engagement & company characteristics
- **ML integration point** Interface that consumes the AI/ML engineer's conversion-probability output
- **Scoring API** Endpoint/function that returns a lead's final score on request
- **Next-best-action output** Recommendation attached to each score for the sales team

NEXT STEPS

Beyond Day 17

1

Finalize rules engine

Tune weightings for engagement and firmographic signals

2

Integrate ML output

Wire the AI/ML engineer's model output into the aggregator

3

Test scoring API

Validate accuracy and response consistency end-to-end

4

Connect to Streamlit

Display live lead scores and next-best-action in the dashboard

Thank You
