

SALESGENIE AI

CRM Integration API

Module 5 — Conversation Intelligence & CRM Integration

Kirti Chandra Nayak

Backend Developer · Team C

Team Task Chart · Day 21

Virtual Class Session

AGENDA

What I'll walk through today

01

Project Recap

Where CRM Integration fits inside SalesGenie AI

02

My Role & Scope

Backend developer responsibilities

03

Today's Key Task

FastAPI endpoints for CRM schema mapping

04

Backend Architecture

How call data maps into Salesforce / HubSpot

05

Tech Stack

VS Code · Python · FastAPI · Streamlit

06

Deliverable & Next Steps

The CRM Integration API and what follows

Where this task sits in SalesGenie AI

5

Conversation Intelligence & CRM Integration

- Summarize sales calls, meetings, and customer interactions
- Extract key discussion points and action items
- Integrate with CRM platforms for activity synchronization

↳ Today's focus: CRM Integration (backend)

Backend Developer

BACKEND DEVELOPER

Connect SalesGenie AI to the CRM

- Build FastAPI endpoints for CRM integration
- Map internal data fields to Salesforce & HubSpot schemas
- Handle authentication & API calls to CRM platforms
- Sync call summaries, action items, and activity records
- Connect the integration layer to the Streamlit app

Build FastAPI Endpoints for CRM Integration

Salesforce / HubSpot schema mapping — backend implementation

1

API Endpoints

Design FastAPI routes to create, update, and fetch CRM activity records from SalesGenie AI.

2

Schema Mapping

Map internal fields (summary, action items, contact) to Salesforce & HubSpot object schemas.

3

Sync Layer

Push conversation summaries and action items into the connected CRM as activity records.

How a conversation reaches the CRM

Tools I'm building this with

VS Code

Development environment for writing and organizing the backend codebase.

Python / FastAPI

Core language and framework for building the CRM integration endpoints.

Streamlit

Front-end surface that consumes the integration API and displays sync status.

DELIVERABLE

CRM Integration API

What the backend delivers as part of Module 5

- **FastAPI endpoints** Routes to create, update, and fetch CRM activity records
- **Schema mapping** Internal data fields mapped to Salesforce & HubSpot object schemas
- **Auth handling** Secure connection to CRM platforms via API keys / OAuth
- **Sync service** Pushes call summaries & action items into the CRM as activities
- **Streamlit hookup** Dashboard view showing sync status per lead / interaction

NEXT STEPS

Beyond Day 21

1

Finalize schema mapping

Cover edge cases across
Salesforce and HubSpot object
fields

2

Add error handling

Retry logic and failure logging
for CRM API calls

3

Test sync endpoints

Validate end-to-end sync with
sandbox CRM accounts

4

Connect to Streamlit

Show live sync status and logs in
the dashboard

Thank You
