

SALESGENIE AI

Sales Analytics Dashboard

Module 6 — Dashboard & Sales Analytics

Kirti Chandra Nayak

Backend Developer · Team C

Team Task Chart · Day 26

Virtual Class Session

AGENDA

What I'll walk through today

01

Project Recap

Where Dashboard & Analytics fits inside SalesGenie AI

02

My Role & Scope

Backend developer responsibilities

03

Today's Key Task

Sales analytics dashboard & KPIs

04

Backend Architecture

How raw data becomes dashboard KPIs

05

Tech Stack

VS Code · Python · FastAPI · Streamlit

06

Deliverable & Next Steps

Dashboard UI + Analytics API and what follows

Where this task sits in SalesGenie AI

6

Dashboard & Sales Analytics

- Interactive dashboard for lead tracking and sales performance
- Monitor conversion rates, pipeline status, and outreach effectiveness
- Generate sales intelligence and performance reports

↳ Today's focus: Sales Analytics Dashboard (backend)

Backend Developer

BACKEND DEVELOPER

Turn raw sales data into live KPIs

- Build the analytics API that computes conversion rate, pipeline value & sales cycle KPIs
- Query and aggregate lead, deal, and activity data for reporting
- Build the Streamlit dashboard UI that consumes the analytics API
- Keep dashboard data refreshed as underlying records change

Build Sales Analytics Dashboard

Conversion rate, pipeline value, sales cycle KPIs — backend implementation

1

Conversion Rate

Compute lead-to-deal conversion percentage across the pipeline.

2

Pipeline Value

Aggregate open deal values by stage to show total pipeline worth.

3

Sales Cycle KPIs

Calculate average time leads take to move from first contact to close.

4

Dashboard UI

Render these KPIs as live charts and tables in Streamlit.

How raw data becomes dashboard KPIs

Tools I'm building this with

VS Code

Development environment for writing and organizing the backend codebase.

Python / FastAPI

Core language and framework for the analytics API and KPI calculations.

Streamlit

Dashboard UI that renders KPIs as interactive charts and tables.

DELIVERABLE

Dashboard UI + Analytics API

What the backend delivers as part of Module 6

- **Analytics API** Endpoints that compute conversion rate, pipeline value & sales cycle KPIs
- **Data aggregation logic** Queries leads, deals, and activities to build reportable metrics
- **Dashboard UI** Streamlit app rendering KPIs as charts and tables
- **Pipeline status view** Visual breakdown of deals by stage and value
- **Refresh handling** Dashboard reflects current data as records update

NEXT STEPS

Beyond Day 26

1

Add more KPIs

Outreach effectiveness and lead source performance metrics

2

Optimize queries

Speed up aggregation as lead & deal volume grows

3

Add filters

Let users filter dashboard by date range, owner, or stage

4

Polish dashboard UI

Improve layout, charts, and readability in Streamlit

Thank You
